

MP17033 Unity - Data Collection and Transformation Report

Date of Analysis: 07-Aug-2023

Introduction

This report provides a comprehensive analysis of the cost associated with different Equipment in the Unity FPSO Project. The analysis focuses on Piping, Special Piping, Structure, Valves and Bolts scopes within the SBM Scope and YARD Scope. The report includes an overview of all scopes and materials, followed by detailed insights for each material type. Additionally, information on suppliers will be incorporated into the analysis. The report will also present the total cost, cost breakdown for each equipment, cost per kilogram, and cost per supplier.

Overview of Scopes and Materials

This analysis of the Unity Project consists of various scopes, including:

a. SBM Scope

- Piping
- Special Piping
- Valve
- Bolt

b. YARD Scope

- Piping
- Special Piping
- Structure
- Valve
- Bolt

Data Collection and Transformation: Enhanced Project Analysis Report

Overall Summary

The Unity Project FPSO stands as a key project for our organization. It signifies deep operational and financial implications. Our in-depth analysis provides insights into the project's scope and complexities. Upon examining, the total material weight for the project is 3737.910 metric tons. This includes various components from small fittings to major structural parts. The Material Take Off (MTO) shows an equipment cost of \$60268.567. Including all aspects of the Unity Project FPSO, the total financial implication is about \$1143870.686. Manpower and time are crucial. We foresee a need for 620673.630 hours just for material installation. Proper resource allocation ensures project completion on time. The project demands 607407.0 individual material pieces, highlighting its intricacy. About 146658.838 meters of material is needed, with 86614.600 meters sourced from the YARD.

Detailed Scope Analysis

In our assessment, we've distinguished between two primary scopes: SBM and YARD. Under the SBM scope, there's a total of 601921.0 pieces, markedly higher when compared to the YARD scope, which totals 5470.0 pieces. When considering weight, materials in the SBM scope amass to 5517.362 tons. On the other hand, YARD scope materials have a cumulative weight of 62.891 tons. These figures underline the material distribution and weight disparities between the two pivotal project sectors.

Material Types Breakdown

The weight distribution across various material types reveals key insights into the project's construction. Piping emerges as the dominant material, accounting for a notable 4256720.270 tons. Following closely are the valves, which contribute 1208149.300 tons, making them the second most weighty category in the project. Structural elements, pivotal to the project, register a total weight of 10416.900 tons. Not to be overlooked, special piping materials, a distinct category in our inventory, weigh 118560.100 tons. Such a breakdown accentuates the emphasis of particular material types, echoing the project's functional requirements and design choices.

Understanding Surplus and Wastage

In the evaluation of the project's material management, we identify two essential components: surplus and wastage. The surplus primarily manifests in piping, where an additional 746 pieces are noted. These surplus materials represent an associated cost of \$294931, highlighting the need for efficient utilization.

Concurrently, we have identified wastage within structural materials. Approximately 13010.2 tons of structural wastage have been observed. This insight emphasizes the significance of meticulous material planning and allocation to minimize waste and align with budgetary constraints.

Purchase Order (PO) Metrics

The overall total pieces of piping, special piping and bolt analyzed from the PO placed are 23576.0, and the total meters mainly from piping are 14323.0.

SBM SCOPE - Breakdown

Piping Details

Total Piping Weight 4228.43 TONS with a cost of 21505.96 Thousands USD.

Total Piping pieces 99555.00 and meters of materials 59404.97

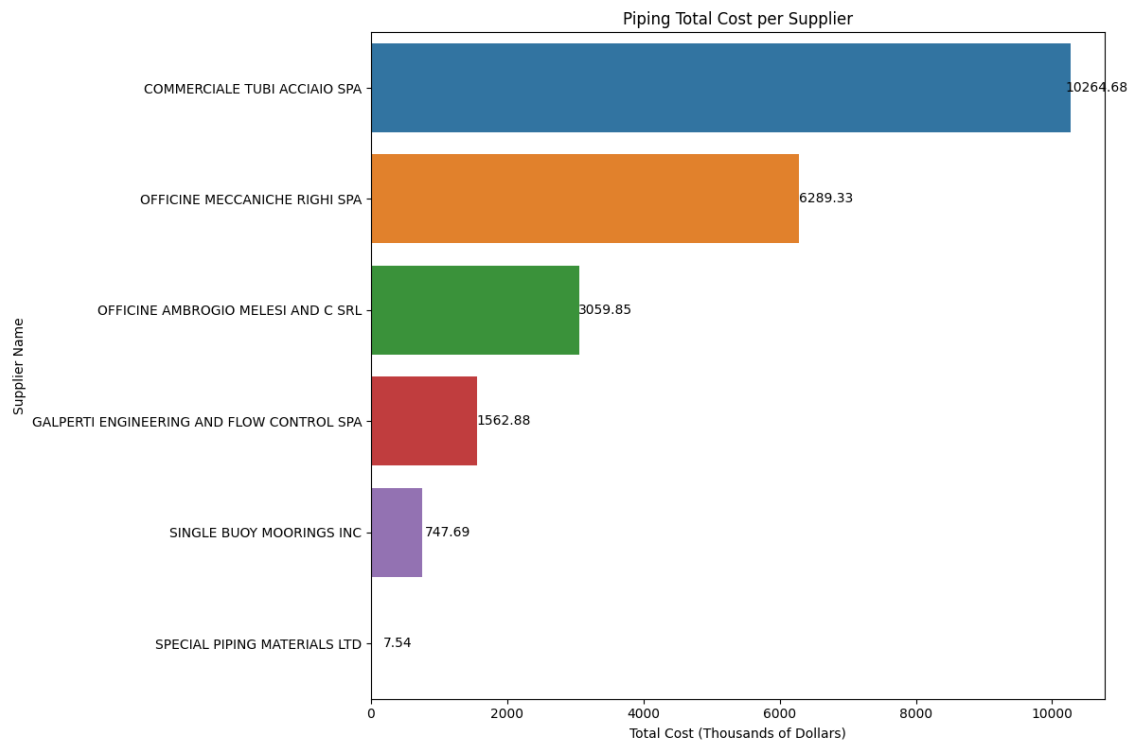

a. Total Piping Weight per different Materials.

a. Piping cost and weight relation.

a. Total Piping Cost by the Material Type.

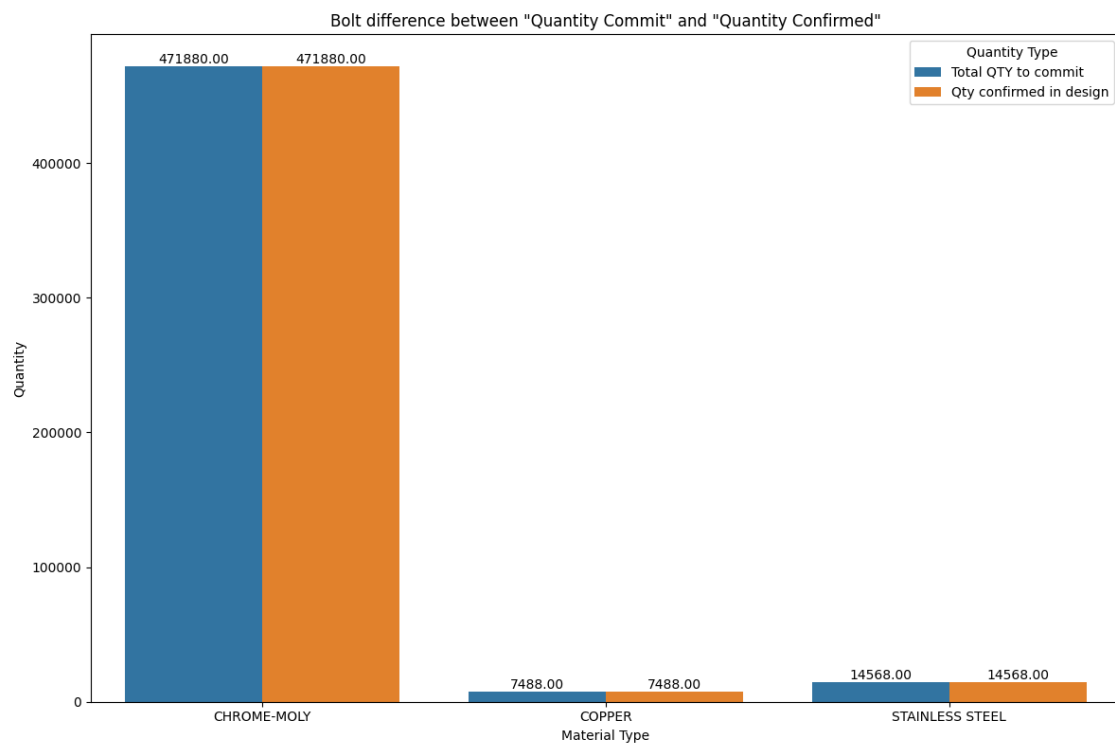

a. Total Piping Cost represented by different suppliers.

Bolt Details - SBM Scope

Bolt Total Pieces 493936.00

Bolt Total Cost is approximately 112.26 thousands of dollars.

1. Bolt quantity in design versus quantity committed.

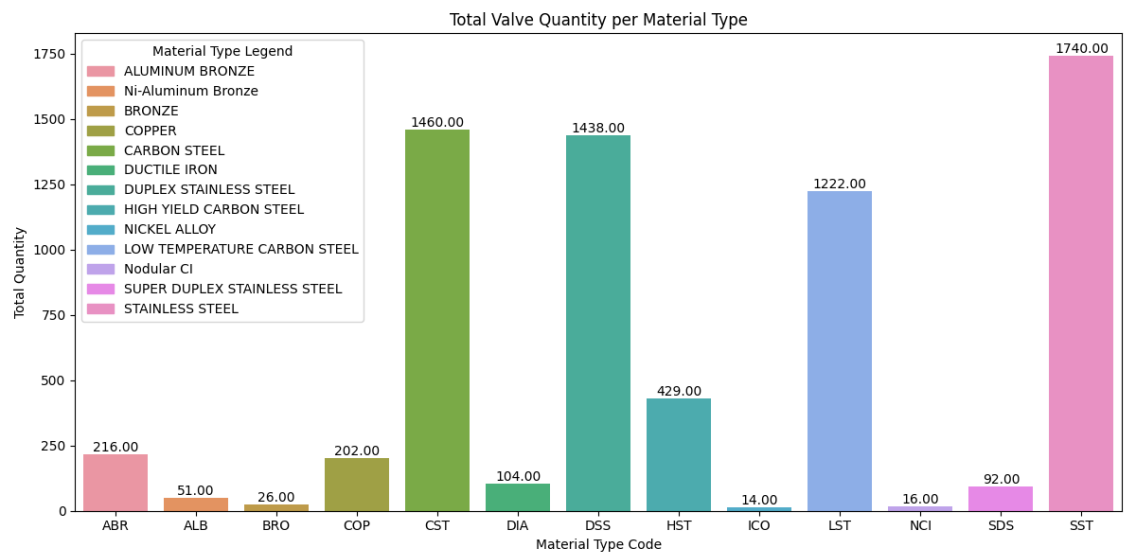

Valve Details - SBM Scope

Valve Total Weight 1188.28 TONS

The overall Valve quantity comes to 7073.00

1. Bolt quantity in design versus quantity committed.

1. Bolt quantity in design versus quantity committed.

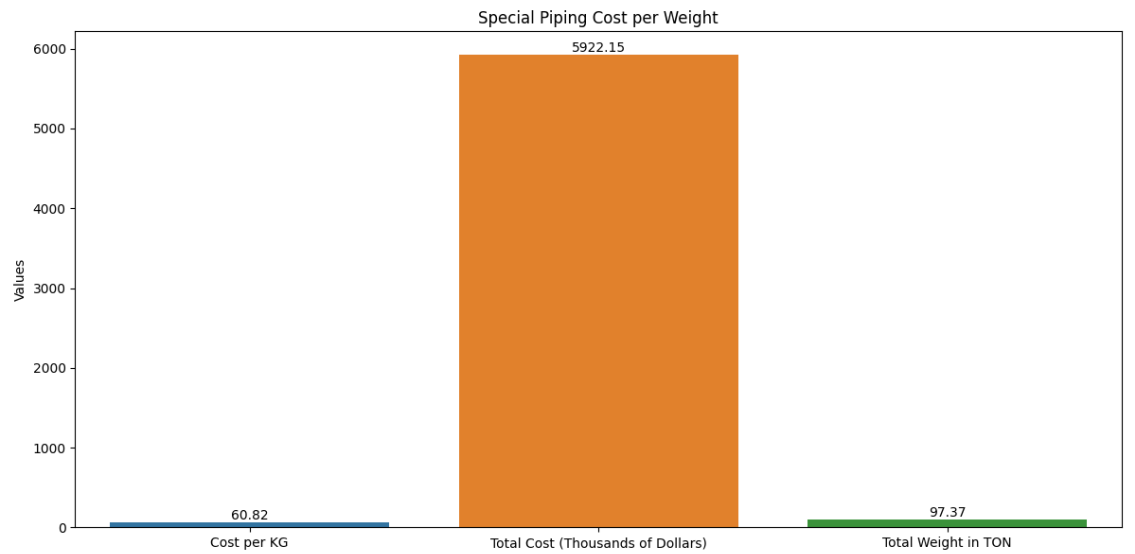

1. Bolt quantity in design versus quantity committed.

Special Piping Details - SBM Scope

For the Special Piping we have a total Weight of 100.65 TON's

Special Piping total pieces are 1357.00 with an approximately cost of 5922.15 Thousands of dollars

1. Bolt quantity in design versus quantity committed.

1. Bolt quantity in design versus quantity committed.

YARD SCOPE - Breakdown

Piping Details

Total Piping Weight 4228429.74
Total Piping pieces 99555.00 and meters of materials 59404.97

Valve Details - YARD Scope

Total Piping Weight 4228429.74
Total Piping pieces 99555.00 and meters of materials 59404.97

Bolt Details - YARD Scope

Total Piping Weight 4228429.74
Total Piping pieces 99555.00 and meters of materials 59404.97

Special Piping Details - YARD Scope

Total Piping Weight 4228429.74
Total Piping pieces 99555.00 and meters of materials 59404.97

Structure Details - YARD Scope

Total Piping Weight 4228429.74
Total Piping pieces 99555.00 and meters of materials 59404.97

Conclusion

In-Depth Reflection on Unity Project FPSO Materials Analysis

The thorough examination of materials for the Unity Project FPSO has illuminated critical details about equipment quantity, weight, and associated financial implications. Such insights underscore the paramountcy of adept supplier management and the proactive steps needed to fine-tune materials optimization. This ensures minimized wastage and surplus, key considerations for any major project.

By leveraging this data-driven analysis, teams can sculpt strategies for adept project planning, astute budgeting, and judicious resource allocation. As we move forward, it becomes increasingly clear that the bedrock of a successful Unity Project FPSO lies not just in its physical construction, but in the sagacious strategies that reduce costs and bolster efficiency. Embracing these findings is our stepping stone towards an economically sound and smoothly executed project outcome.

The cost analysis of materials in the Unity Project FPSO provides valuable insights into the quantity, weight, and costs associated with various equipment. The study highlights the significance of proper supplier management, as well as the importance of optimizing materials to reduce wastage and surplus. The data can be utilized for effective project planning, budgeting, and resource allocation. By ensuring efficient procurement and handling of materials, the Unity Project FPSO can enhance cost-effectiveness and streamline the construction process, leading to a successful and economically viable project delivery.
